Same model. Same questions. With and without our data.

We asked Claude 20 hard, tangled relocation questions a non-EU employee moving to Paris really asks: age, contract type, rent caps, deadlines and exceptions in one question. Once the model alone, once grounded in EUntangled's verified corpus of official French sources.

CORRECT AGAINST THE OFFICIAL TEXT

45% → 75%

ANSWERS WITH A WORKING OFFICIAL SOURCE

50% → 95%

By category (5 questions each)

Category	Correct · model alone	Correct · EUntangled	Working source · alone	Working source · EUntangled
Housing	1 / 5	**5 / 5**	1 / 5	**5 / 5**
Bank	3 / 5	**5 / 5**	2 / 5	4 / 5
Visa & permits	3 / 5	3 / 5	3 / 5	**5 / 5**
Health & social security	2 / 5	2 / 5	4 / 5	**5 / 5**
Total	**9 / 20**	**15 / 20**	**10 / 20**	**19 / 20**

One example: Visale rent guarantee

“I'm 25, a non-EU employee who just signed a permanent contract. Is there a deadline to apply for Visale after I was hired, and how are our resources counted?”

MODEL ALONE · GRADED WRONG

Says the age route means the post-hire deadline “does not apply to you” and admits it is “answering from memory”. Cites visale.fr and actionlogement.fr, not the official rule page.

EUNTANGLED · GRADED CORRECT

Apply within 6 months of hiring, and get the visa before signing the lease. Flags the part of the rule it could not verify. Cites `service-public.fr` F33453, verified 22 Oct 2026.

Why not just ask a chatbot?

Trust
Every answer cites a tier-1 official page and the date it was verified. No source means “confirm with a specialist”, never a guess.

Freshness
Sources are re-fetched and content-hashed. A changed page creates a new rule version and fires `rule.changed`.

Personalised to the case
Rules are filtered by nationality group, permit type, city and start date. A chatbot answers for everyone at once.

Automatic tracking
Steps and dependencies live in a case graph. A delay shifts every downstream step and flags risk before the start date.

Agents that monitor
The Watcher re-plans every affected case when a rule changes, and tells the employee and the mobility team why.

Verified, not generated
The Extractor quotes the official text, and a separate Verifier drops unsupported fields (about 95% of fields passed).

Method: questions and reference answers generated from verified quotes in the corpus (9 official sources, 20 active rules); answers graded by an LLM judge; source links checked with live HTTP requests during the run. Small sample, one run, indicative. References not reviewed by a lawyer. Tax, phone and transport not yet in the corpus. Raw data: github.com/francoxortiz1975/EUntangled/data.
